The Habit of Saving

Saving (like spending) is a habit, and once you have acquired the habit of saving a part of your income you have taken a long step on the road that leads to financial independence.

The easiest may to acquire the habit of saving is to open a savings account here (\$1:00 starts an account) and then each week or each month, as the case may be, deposit a certain stated part of your salary. Your bank book, with its steadily increasing balance, will be a source of pride and satisfaction to you and will be an incentive to further sav-

LEPROSY CAUSES LONG LIFE

The death of J. Pierpont Morgan, E. H. Harriman and so many other prominent Americans and the injured health of ex-president Diaz and Gen. B. J. Viljoen and hundreds of other prominent men Who have visited Carlsbad, Germany, and other well known mineral springs and great noted specialists proves they are a great injury instead of a help to suffering humanity

And the many apparent cures at springs are only temporary whipping up of the nerves and they become weakened soon after and in a few years are worse than ever, and death following so often is the almost inevitable result. While freeing the nerves by Osteopaths, and thus causing the perfect circulation of blood which made every part about you in first place, so it can carry out the impurities and build up the wasted part, is why Osteopathy has made so many perfect cures here in El Paso. If you have a bad appendix, go there, like these three in the test cases and like many others have done for all kinds of sores and we have always saved by far the largest percent of any healing yet discovered. In islands where the natives have leprosy they live the longest of any inhabitants of the islands, say the statistics of the government. This is of interest to every living soul for there is a reason. It furnishes an escape for all the stagnant blood from the body so they have no other kind of diseases. They cannot heal it up like the doctors heal up the sores today which are always there for the purpose of draining out the stagnant impure blood of the body and should never be healed up by drugs or other methods as the impure, stagnant blood, if sealed in by healing, will go to the lungs and be oxidized and overtax them and tuberculosis is always the result. That is why more than entire inhabitants of South Dakota die of tuberculosis each year in the United States in prime of life. That is why the Osteopaths who use no drugs, mineral waters nor stimulants cure their patients without throwing them into consumption or cancers and they remain healthy without being thrown into a worse disease than they had before as is the case by exhausting, with drugs, into consumption and cancers and sealing up stagnant, impuer blood in the system by healing sores. For the sores will heal themselves up when they are no longer needed. When the Osteopaths has opened the kidneys and liver and purified the blood by giving it good circulation, so it can carry out the impurities you are permanently well, and the sores not being needed are healed up by the blood again, just like it did when the blood first made that part—and like it did when it cured these appendixes.

No More Use For The Surgeon's Knife

THE TEST---Six Cases of Appendicitis. 3 Tried Surgery 3 Tried Osteopathy

One of those who tried surgery died. Another is now very low from second operation. Other one suffers with indigestion. The gentleman who took Osteopathy is a perfect picture of health. The young lady is also in perfect health. The married lady is as well as any young lady in town, be enforced to prevent the sale of head-All of these live right here in El Paso and will tell you their experience the same as this lady. All were told they could not live without operations.

Read What She Says:

El Paso, Texas, Jan. 17, 1913.

Dear Doctor Collins:

I wish everyone knew how you can cure Appendicitis. For I was so badly afflicted and an operation was demanded immediately, and like everybody else I dreaded it, as so many lose their life. But after taking treatments I am now in perfect health and have been ever since. Lct everybody know about me and the others who took at same AND HE DONT. NO CHRISTIAN when he was so exhausted he couldn't scientist, NOE osteopath who talk nor hold anything on his street. time. Yours. MRS. J. C. HARDWIG.

2001 Ohio Ave., El Paso, Texas. Hr. Magendie was right-it is the knife and drugs that kill. He divided the putients. While head of Hotel Dicu, largest in France, gave out-half nothing or bread pills and lost one out of a hundred, every kind of disease. Gave the other built drags and stimulants, according to medical standard; lost 20 to 40 out of a hundred, same diseases. He declared when made president of largest medical school in France, it is the drags and stimulants that kill, not disease. Or, Still Osteopathy Infirmary has demonstrated it right here in El Paso by hundling all kinds of disease and lost least percent ever

Feel your spine, the trouble is always there.

TION OF CONSUMPTION.

ing them from getting various soothing law of his either in Nature or the Book is now helping run the store and ensyrups, which always contain verious of Best von must reap its awful pointes and paralyze the nerves and consequences. Like America is today in plant the seed of future disease.

Government Wages War On Sale of Spoiled and Unhealthy Foodstuffs

Rene Bache

Wormy Flour Rejuvenated in Wholesale Lots; Tomato "Swill" Converted Into Table Catsup; Cider Sold for \$4 Quart.

ASHINGTON, D. C., April 5 .-"Products fit only for swine ought not to be employed for

This is the idea on which the gov-rament is proceeding in its efforts to out a stop to the use of objectionable put a stop to the use of objectionable refuse of tarious kinds as a contribution to the dictary of the common people. Theogh by no means generally understood, it is a fact that the chief object of the pure food law is to drive rotten and filthy products out of the market. Utilization of wastes is an important feature of convertation, but the wastes employed for food purposes must be clean wastes.

Take, for example, a picturesque

must be clean wastes.

Take, for example, a picturesque form of enterprise recently investigated, xiz: the marketing on a large scale of wormy flour. Immense quantities of such flour, stored by New York brokers in Jersey City and other towns in New Jersey have been lightered across the North River, sifted to get rid of the weevils, resacked, and disposed of in the ordinary way as a fresh article. Of course, being in such a condition as to be unsuitable for human food, the brokers get it cheap. To put it through the process described costs very little and the profit is large. When, not long ago, some thousands of bushels of this kind of flours were seized on arriving in New York by the pure food police, the broker to whom the stuff was consigned declared that it was not meant to be used for human food at all but in the manual food version in the stuff was consigned declared that it was not meant to be used for human food at all but in the manual food version into for versionities. The recipe in the commercial uses of the fluid is to serve as an adulterant of canned to-matter as an adulterant of the commercial uses of the fluid is to serve as an adulterant of the commercial uses of the fluid is to acre as an adulterant of canned to-matter as an adulterant of the commercial uses of the fluid is to acre as an adulterant of the commercial uses of the fluid is to that it was not meant to be used for human food at all, but in the manu-facture of paste, to which, of course, there could be no possible objection. But investigation disclosed the fact that this broker was actually maintaining a paste factory for nothing else than a cover, his real business being the marketing of the material, minus the worms, for making bread.

Unscaling Canning Pinnts.

Consolements among the waster of

Conspicuous among the wastes of food factories put on the farket is the refuse of tomato canneries—chiefly derived from numerous small chiefly derived from numerous small canneries which put up tomatoes and nothing else. Such canneries are to be found in Maryland, for example, at almost every crossroads—a typical outfit of the kind occupying two or three sheds or outbuildings, maintaining its operations for only about six weeks in the year, and turning out perhaps 1,500 or 2,500 cases as its total annual production.

The government authorities would

But this is not all. The tops, cores, and skins, removed in the manner, described? are transferred to a "pulper"—a wire mesh cylinder with revelving blades inside, which grinds up the waste material, and, while retaining the solld parts of it, allows the fluid to escape into a vat. The fluid is boiled down, canned and sold to the flalians in many cities. Most of it, however, is bought in bulk by large firms, which use it, with spices and other ingredients, for the manufacture of catsup, if the stuff were clean, of cateup, if the stuff were clean, there would be no objection, but the waste from the tomate fluid is derived is usually flithy and more or less decomposed. Furthermore, one of the commercial uses of the fluid is to

few real berries being intoduced for the sake of versimilitude. The recipe is usually 58 per cent apple waste and the rest giucose, with artificial coyor-ing and a fluor. ing and a flavor reinforced by a color-thetic chemical. Froit Jellies do no need to contain any real stuff; when they are concerned, it is necessar; merely to add the glucose, flavoring,

Such preserves and Jellies have a Such preserves and Jellies have a legitimate use, being relatively cheap, and, therefore, available to a great many people who cannot afford to buy "straight" strawberries or rasperries in cans or jars. But the stuff employed for the purpose, as a matter of fact, is often decayed or wormy, or both, and the government is obliged on this account to keep a sharp watch on the manufacturers.

Using Decayed Berries.

It has been a common practice to

It has been a common practice to ship carloads of half-decayed berries to be put up as preserves or jellies. In one city (which the authorities re-

six weeks in the year, and turning out perhaps 1.506 or 2.500 cases as its total annual production.

The government authorities would put such canneries out of business for keeps" if possible. They are run wholly without regard for sanitary methods. The tomatoes, fetcher in wagons by near-by farmers, are handied by contract labor—often by lialians or Huns, recruited from the cities. These hirelings, many of thom children from five years old up, work at long tables, on both sides of which they stand, and are paid so much per bucket for the pecied product—the pecling being done stier the tomatoes have been dumped into a "scalder" to losen their skins.

Filth in Temato Waste.

The process, very rapidly performed consists in inserting the point of a knife in such a way as to remove the top and core of each tomato, where upon, the skin comes off in the other hand, and the pulp is dropped into a bucket. Finally the contents of the buckets are poured into the hopper of a machine which feeds the stuff into the cans. Unfortunately, the tomato being '5s percent water, the incidental waste is large, and there is great accumulation of fifthy refuse. Conditions of course, are very uncleanly, and the water in the scalder is nothing fore nor less than a "swill."

It has been a common practice to ship carloads of half-decayed berries to sumble a business of hands of half-decayed berries to ship carloads of half-decayed berries to ship carloads of half-decayed berries to ship carloads of half-decayed berr

Sometimes it happens that considerable quantities of tinned fruits or other such articles accumulate unsold; the caus become rust-eaten, and the contents undergo deterioration, instead of being thrown away, the stuff is reprocessed making it appearance in fresh and attractive containers. Sardines are put up with mustard, which has a tendency to attack the containers, the result being that sails of tin prevade the tissues of the fish. Thus it has become a common practice to ship canned cardines, which have remained unsold for a long time, to Mississippi and other parts of the South, where they are sold at five cents a can to negroes on the plantations.

Where things to eat or drink are concerned, the prime luxury in the popular extimation seems to be cham-

conce.

One pays for it commonly \$4 a quart and at that price it ought surely to be the real stuff. But is it? The answer is, by no means; or at all events only sometimes. According to the government Bureau of Chemistry, it is quite as likely as not to be merely

Clder at \$4 a Quart.

Think of paying \$4 a quart for cider. The very idea gives one a pain in the pocketbook. Yet it is a fact that within the last few months the government pure food police has confiscated and condemned large quantities of such champagne, adorned with the most attractive "forcign" labels, and scaled and somuled exactly like

tities of such champagne, adorned with the most attractive "foreign" inbels, and scaled and supsailed exactly like the imported article.

The government has no objection whatever to the preparation and sale of such a product. What it dislikes and positively forbids is the marketing of it under the name of champagne. Hence it is that within the last few months some thousands of gallons of this kind of "wine" have been emptied into the Mississippi river, or otherwise rendered unavailable to innocent consumers and a dead loss to the manufacturers.

tracturers.

For another instance, consider the manaschine cherry. It is generally regarded as a first-class luxury.

The real manaschine cherry is a small-sized fruit of its kind, grown in southwest Austria and in certain provinces of Greece. It is sometimes known as the "Zara cherry," because exported chiefly from that seamous from cherries of this variety is obtained, by distillation, the liquor, of a peculiar flavor and pursency known as "maraschine," In it the little cherries are preserved and, thus prepared for market, are called "maraschine cherries."

Counterfeit Cherries for Cockinsts.

Counterfelt Cherries for Cockinils. Counterfeit Cherries for Cockialis.

There is considerable traffic in maraschino and in the afore-mentioned cherries from Zara, which are exported to all parts of the world. But it is small in extent with the trade in the imitation liquer and the counterfeit cherries within the limits of the United States. The bosus liquor, sold in this country, is nothing but a white syrup containing 50 per cent of grain alcohol, colored with a coal far dye, and flavored with oll of hitter almonds. Most of it is manufactured in Cincinnati, by a number of firms, as for the cherries, they come from any place that can furnish suitable fruit.

Speaking of drinkables, there is vodka. What is vodka? The national spirituous beverage of Russineverybody knows that. Most people are not aware, however, that it is distilled from potatoes, and that its

manufacture is a monopoly held by THIS WILL INTEREST MOTHERS, the Cyar's government. Crar's government.

But what is vocka in the United States? Something very different—in fact, nothing more nor less than or-dinary grain alcohol diluted to a lit-tle above "proof." It is a fraudulent the above "proof." It is a fraudulent product, put up in Brooklyn and other cities and extensively soid to immigrants from Russia. The imperial seal is exactly copiest. The imperial seal is exactly copiest. The label, in Russian betters, is an accurate imitation, even to the printing on the under side of it, which can be read only by looking through the bottle. In short, the article is a very clever cheat. One can buy it for \$1 a "quart"—the sort of quart that measures fire to the gallon. It costs the bottlers hardly more than 50 cents a gallon, so that the profit is highly satisfacso that the profit is highly satisfac-

the consumption of which in this country is enormous, are used for no other reason than that they are supposed to be germ-free and safe to drink. But, unfortunately, the government experis have found that frequently they are infected with dangerous foecal organisms. The springs from which they are derived may be all right, but they are liable to be bottled under unsanitary conditions. Not long ago samples of the most widely advertised of all the bottled waters were discovered to contain typhold germs.

Poluted Weter Shipped from California There is another very popular spring water that comes from Callfornia. It is shipped across the continent in tank cars and bettled in St. Louis. Quite a lot of it, offered for sale in New Orleans, was found to contain bacillus cot and other foca ctranisms. Inquiry in this case to contain bacillus cot and other foc-ca organisms. Inquiry in this case led to the discovery that the St. Louis dencern which bottled it was filtering it, as a prelminary, through sand ob-trined from the Mississippi river! It may be added in this connection that one of the principal springs at Sara-togs, from which water was being shipped out by thousands of gallons, was found recently to be badly pel-luted.

Mother Grav's Sweet Powders for Children. Certain relief for Feverishness, Headache, Bad Stomach, Teething Disorders, move and regulate the Sowels and Destroy Worms. They break up colds in 34 hours. They are so pleasant to the taste Children like them. Over 10,000 testimonials. Used by Mothers for 22 years. They score full. Sold by all Drugglets, Spc. Sample mailed FREE. Address, Allen S. Olmsted, Le Roy, R. T.

and eventually into the stomach of the unfortunate ultimate consumer, being utilized in two ways—by freezing and by drying. In either case they are "broken out," i. e., deprived of their shells, as a preliminary to the process they must undergo. Many large establishments in the middle west are exclusively occupied in the business of handling more or less addled eggs, which are either frozen in large cans and placed in sold storage

dled eggs, which are either frozen in large cans and placed in cold storage to await shipment or else are rendered water-free by evaporation in both of these forms the product is sold mostly to bakers and pastry makers. The candy question has offered considerable difficulties from the view-point of the authorities. Such mineral substances as term alba, taic, and barytes (barium sulphate) are commonly used as "fillers" in chesp candy—a practice very undestrable, inasmuch as they tax digestion. At the same time it cannot be said that they are poisonous, and so it is not easy, under the law as it now stands, to put a stop to their employment. In the same category comes the metal

put a stop to their employment. In
the same category comes the metal
silver, used for coating (by dipping
process) the so-called dragees,
which, mixed with other kinds of
"sugar plums" in a box of candy, are
bupposed to lend attractiveness.
Altogether different, however, is
the utilization of sheliac for coating
certain soft candles, such as "fudges."
It is the same stuff that serves as
varnish for woodwork, and is painted
over the candy to make the latter
look more inviting. The fact that it it, as a prelminary, through sand obtained from the Mississippi river! It may be added in this connection that one of the principal springs at Saratoga, from which water was being shipped out by thousands of gallons, was found recently to be badly pellitted.

Vast quantities of partly decomposed eggs find their way to market.

> Dear to the Hearts of the Women. DR. T. FELIX GOURAUD'S

Oriental Cream OR MAGICAL BEAUTIFIER An Indispensable and Necessary Article for Particular Women who Desire to Retain a

Youthful Appearance. Every woman owes it to herself and loved ones to retain the charm of youth nature has bestowed upon her. For over half a century this article has been used by actresses, afragers and women of fashion. It renders the skin like the softness of veives leaving it clear and pearly white and is highly desirable when preparing for daily or evening attire. As it is a liquid and non-greasy preparation, it remains utmoticed. When attending dances, balls or other entertainments. It provents a greasy appearance of the complexion caused by the skin becoming heated.

Gouraud's Oriental Cream cures skin

bented.

Gourand's Oriental Cream cures skin diseases and relieves Sunburn. Removes Tan. Pluppes Blackheafs. Moth Patches, Rash, Freckies and Vulgar Redness, which every women desired a delicately clear and refined complexion

which every woman desires.

No. 10 For sale by Brungists and Fancy Goods Dealers. Ferd. T. Hopkins, Prop., 37 Great Jones Street, New York.
